Example Index by Thornton Gale

The following index is from the book *Getting Results with the Object-Oriented Enterprise Model*, Cambridge University Press (1996), book: 648 pages; index: 2225 entries.

INDEX

A

ABP meta layers structural pattern 545
abstract business process (ABP)
see also structural view of the enterprise; *see also* specific abstract business processes (i.e., inbound logistics; *see also* management and control; *see also* marketing; *see also* operations; *see also* outbound logistics; *see also* sales and service)
ABP layers structural pattern 309-310, 437, 545
abstraction layering definition of 436-437
accountability to the end customer 431-433
actors and 274-277, 282-287, 425, 427-428
business operations planning (stage 5 of fsbp®) and 446-447
class of 268-269, 287, 365, 463, 468, 518, 556
control and coordination hierarchy of 435
Conversion to software objects 508
decomposition of 269, 279, 294-302, 305, 311, 429-430, 518, 529
defining and documenting of 268, 425, 428-430, 433, 518
definition of 268-269
diagram of 269, 281
flow model 431-432, 438

generic use cases of 268, 280-287, 426-427, 475
hierarchy of 269-270, 290, 309, 358, 363, 433-434, 438, 446-447, 466, 500, 545
introduction to 267-268
layers of 269-270, 290, 309-310, 434, 506, 545
objects and 268, 358, 363-365, 463, 506, 518
Porter value chain and 268
ports of 268, 270-274, 276, 288
process dependencies of 358
product flows of 294-299, 358
recursive definition of 268, 288, 294-296, 446
structural patterns of 309-310, 539, 544-545
subprocesses of 269-273
use cases (in general - *see also* specific abstract business processes) 358, 425
use of 242
abstract business process class (starter set) 556
abstract business process structural patterns
ABP meta layers structural pattern 545
definition of structural pattern 545
abstract conceptual entity *see under* entity (of the conceptual type hierarchy)
abstract entity
see also abstract entity class; *see also* entity; *see also* information representation entity; *see also* physical entity
conceptual type hierarchy and 124
definition of 125
use of 132-134, 138, 178, 187, 193
abstract function *see under* object services
abstraction
definition of 11, 219-220
layers of abstraction 58
modeling and 13
use of 11, 210-211, 219-221
abstraction structural pattern 530-531
academic foundations of fsbp®
driving force and strategic framework 514-515
enterprise as a general system 512-514
object-oriented paradigm in enterprise modeling 517
object-oriented technology in enterprise modeling 517-518
value system of the enterprise 515-517
accountability to the end customer *see under* abstract business process
accounting cluster 471
activities of object-flow diagramming *see under* Object-Flow Diagramming
activity (subtype of situation)
see also change mechanism; *see also* conceptual process; *see also* event; *see also* process artifact; *see also* process step; *see also* situation
conceptual type hierarchy and 124
definition of 127

duality with entity 134
entity and 132-134
activity class (starter set) 548-549
activity classes (starter set)
definition of 555
hierarchy of 556
process class 555-557
actors
see also port; *see also* use case
abstract business processes (ABP) and 274-277, 282-287, 358, 425, 427-428
definition of 274-276
diagram of 276
generic use cases and 280-287, 427
interaction diagramming and 279-280
use cases (in general) and 274-278, 288, 358, 425, 501-502, 505
adapting the Porter Value Chain *see under* functional business model (FBM) (during stage 3 of fsbp®)
adaptivity value of information *see under* information
allocation process class (starter set) 561
allocation structural pattern *see under* resource usage structural patterns 538-539
adaptivity explaining why information is exchanged *see under* information-processing node
applications list (developed during stage 7 of fsbp®)
characteristics of 326, 365, 470, 474-475
definition of 474
developing 365, 475
documenting 365, 475
applications *see under* global object space (GOS); *see under* infrastructure objects definition (stage 7 of fsbp®)
architecture of GOS *see under* global object space (GOS)
assessment process class (starter set) 559
assessment process classes (starter set)
auditing process class 560
quality assessment process class 559-560
asset definition *see under* business resource requirements (during stage 5 of fsbp®)
associative relation
see also case relation; *see also* relation; *see also* spatial relation; *see also* temporal relation
conceptual type hierarchy and 124
definition of 131, 179
object-oriented modeling of 131, 179
similarities with object classification 131
use of 131, 179, 184
associative relation (conceptual modeling) *see under* relation (of the conceptual type hierarchy)
associative relation (object-oriented modeling) as *see under* relations (object-oriented modeling of)
asymmetrical interdependence of layers *see under* multilayer systems organization

Athey, Thomas 8, 26, 29-30, 45, 219
attribute (of object) *see under* object properties
auditing process class (starter set) 560
autonomy of lower layers of a hierarchy *see under* hierarchical-multilayer systems

B

Balmforth, Ann 12, 115
Bapat, Subodh 14-15, 24, 103, 106-108, 116-118, 180
Barash, M. 325
behavioral business rule *see under* business rule
behavioral constraints *see under* constraints (on object relations)
behavioral property of objects *see under* object properties
behavioral view (during software development) 489-491
behavioral view (of the enterprise)
  analyzing 315
  definition of 313-314
  layers of and future strategy business planning 520
  meaning of 314-319
  state-transition diagramming and 315-319
  use of 243, 336, 520
behavioral view (of the general system)
  compared to functional view 41, 313
  compared to structural view 41, 313
  documenting with state transition diagram 38-39
  enterprise and 243, 313, 336, 365, 520
  example of automobile engine 39
  example of financial model spreadsheet 37, 40
  introduction 37
  modeling and 37, 40, 491
  object-oriented analysis (OOA) and 489, 491
  use of in systems analysis 37-41, 49, 311, 313, 336, 508
Bell Telephone Laboratories 79
Bhargava, B. 325
Boeing 108
Bohm, David 112
Boise Cascade 208
Booch, Grady 102, 177
boundary of general systems
  see also environment of general system
  criteria for determining 29
  defining 28-29
  definition of 28-29
  enterprise modeling and 194-195
Bounding, K. E. (classification of systems) 42, 49, 52
brokerage structural pattern 539-540
business definition (as a pivotal construct)
  capabilities and 234-235, 381-382
  diagram of 237
  driving force and 232

environmental research and 231
products and markets and 233-234, 381-382
results and 235-236, 381-383
semantics (expansion) to describe 233
strategic framework and 230-231, 236-237, 367, 515
strategic imperatives and 231-232
strategic mandates and 231-232
business definition (stage 1 of fsbp®)
see also competitive evaluation; *see also* industry value system evaluation; *see also* market value system evaluation; *see also* socio-political value system evaluation; *see also* strategic areas assessment; *see also* strategic imperatives; *see also* strategic mandates; *see also* strategy and positioning evaluation
deliverables of 348, 391
development process of 349
future states evaluation of 372
industry fundamentals addressed in 368-369
information accumulation 371-372
interfaces with other stages 369-370
introduction to 367
matrices and 349-350
metamodel of 390-391
methodology summary 367-370
overview of 348-351
process map overview 345-347
purpose of 348-349, 367
research and analysis 349, 369-372
business entity
business rules and 263
business event
definition of 424
documenting 424, 438
use of 246, 424
business foundations
chaos and fractals (of Mendelbrot) 209-211
driving force (of Tregoe and Zimmerman) 205-208
introduction to 203-204
strategic framework (of Tregoe and Zimmerman) 208-209
value system (of Porter) 204-205
business function
see also functional areas (of the enterprise); *see also* functional view (of the enterprise); *see also* enterprise modeling (stage 4 of fsbp®)
business process and 242, 246, 258, 266, 412, 421-422, 425
decomposition into business processes 258, 266, 412, 421-422
defining 412, 420-421
definition of 246-247, 416
diagram of 259
use of 242, 245
business operations planning (stage 5 of fsbp®)
see also business resource requirements; *see also* business systems definition; *see also* hierarchical analysis; *see also* operating unit structure
business systems definition of 359
deliverables of 358, 451-452

development process of 360
enterprise modeling class library and 472
infrastructure architecture (stage 6 of fsbp®) and 443
interfaces with other stages 443-444
introduction to 441
metamodel of 450-451
methodology summary 442-443
on-going vs. transition or startup operations 359-361, 442, 450
overview of 358-361
physical assets definition of 359-360
process map overview 345-347
purpose of 358
transition planning of 450
business process
see also abstract business process; *see also* process artifact; *see also* enterprise model (stage 4 of fsbp®)
business function and 242, 246, 258, 266, 412, 421-422, 425
creation of 306
decomposition of 258-259, 266, 268, 412, 421, 446, 500
defining 197, 267-268, 411-412, 421-423, 438, 518
definition of 258, 416
dependency of 246, 259-261, 266, 303, 358, 423-425, 431, 433, 438
documenting 422, 433
information-processing node and 274
information-processing node relation with 293
introduction to 257-258
object-oriented modeling of (overview) 187
Porter value activity and 257
process artifact and 161, 257-258
use of 242
business process modeling *see under* object-oriented software development methodology
business resource requirements (during stage 5 of fsbp®)
definition of 449
documenting 449
human resource definition 449
infrastructure and 449-450
infrastructure architecture (stage 6 of fsbp®) and 449-450
physical asset definition 449-450
procurement of 450
business rule
see also preconditions; *see also* postconditions
behavioral business rules 264-266, 416, 423-424, 427-428, 438
building the list of 413
business entity and 263
defining 261
definition of 261
diagram of behavioral business rules 265
diagram of functional business rules 262
diagram of structural business rules 264
documenting 438
entity attribute business rule 415

functional business rules 262-263, 415, 438
object-oriented modeling and 261
policy business rule 415
postconditions and 264-266, 416, 423-424, 428
preconditions and 264-266, 416, 423-424, 428
principle/law business rule 415
relation business rule 415
strategic imperatives / mandates and 415
structural business rules 263-264, 415, 438
use of 180, 246, 292
business rule class (starter set) 552
business strategies
see also strategy and positioning evaluation (during stage 1 of fsbp®); *see also* strategic mandates; *see also* strategic imperatives
defining 351, 385-388
definition of 385
strategic mandates and 385-386
business systems definition (during stage 5 of fsbp®)
customer value and 448
definition of 447
documenting 448
expertise required to define 447-448
imperatives / mandates and 448

C

Campbell, Jeremy 79
capabilities (of processes)
definition of 142-143
process artifact and 142-143
capability class (starter set) 552
capability entities of process object *see under* process object
cardinality 181-184
case (thematic) relation
see also associative relation; *see also* relation (of the conceptual type hierarchy); *see also* spatial relation; *see also* temporal relation
activity and 132
conceptual type hierarchy and 124
definition of 130
entity and 132-134
object-oriented modeling of 178-179
cause/effect of object messages *see under* object messages
Cellular One 576, 579
change mechanism (subtype of conceptual process)
see also activity; *see also* conceptual process; *see also* event; *see also* process artifact; *see also* process step; *see also* situation
asynchronous events/ messages and 152-156
conceptual process and 137, 140-141, 154
conceptual type hierarchy and 124
decomposition of process and 140-141
definition of 129, 140-141, 145-146
diagram of 152, 172

elementary processes and 140-141, 155
higher level processes and 140-141, 146, 153, 292
information-processing node and 129, 151, 153, 161, 291
integration of process behavior and information-processing node 151
looking inside 152-153
modeling 141
physical symbol system and 153-154, 173, 514
process artifact and 128, 145-146, 151, 161, 173, 292
process object and 172-174
process step and 129, 150, 155, 292
resource (as a) 147-148
script and 141, 154-155
synchronous events/ messages and 154-156
thread of control and 156, 173
change mechanism class (starter set) 556-557
change structural pattern 531-532
channel (information)
enterprise communications 195, 291, 311
information-processing node and 75, 79, 194-195, 291, 303, 311
interface objects and 502
message passing on 78-79, 114, 171-172
problems of 78-79
channel (sales) 253, 256, 378-379, 381, 395
child entity of entity object *see under* entity object
class (of an object) *see under* object class
class hierarchy for enterprise modeling *see* enterprise modeling class hierarchy
class library
see also enterprise modeling class hierarchy; *see also* object classes
enterprise modeling 268, 364-365, 467
hierarchy of 118-119, 365, 470
introduction to 118
use of 118-119, 268, 322, 345, 363-365, 465-470, 491
class relation *see under* relations (object-oriented modeling of)
class-relations diagram
see also entity class-relations diagram (during stage 7 of fsbp®)
associative relations and 184
contents of 183-184
definition of 183
description of 183-186
entity classes and 183
entity-relation diagram and 183
example of 184
modeling by abstraction level (use of) 185-186
operations-layer modeling with 192-193
scenes and 183, 185
scope of 185-186
use of 366
whole-part relations and 184
classification of systems 42-48

classification process class (starter set) 562
classification *see under* object classes
clearing house for structural patterns 530
clock tick
  definition of 127
  use of 20, 38, 127, 136, 258-259
closed system *see under* environment of general systems
clusters (of enterprise objects)
  definition of 468-469
  generic enterprise clusters 470-472
  justification for 469
  nearly decomposable systems and 469
  use in organizing work of enterprise modeling 470
CMIP 333-334
communications problems *see under* channel (information)
competitive advantage 204-205, 215, 226-229, 245-246, 256-257, 455
competitive evaluation (during stage 1 of fsbp®)
  see also Appendix D - Comparative Evaluations Using Matrices beginning on page 571
  definition of 379-380
  matrix analysis of 350, 372, 379-380, 575-583
  matrix examples 575, 578-582
competitive resource allocation profile *see under* resource allocation
complex-adaptive system (level 6)
  description of 47
  diagram of 48
  information processing and 87
  use of 47-48, 52
computer
  see also information processing node; *see also* physical symbol system; *see also* scripts
  abstraction layers of 60-61
  description of 88-90
  diagram of 89
  global object space and 322-323
  information-processing node (as a) 88-90
  multilayered system (as a) 60-61
  universal machine (as a) 88
concept (of the conceptual type hierarchy)
  see also entity; *see also* relation; *see also* scene; *see also* situation
  conceptual type hierarchy and 124
  definition of 124
conceptual modeling
  see also conceptual type hierarchy
  definition of 122
  enterprise modeling and 123-131, 189, 514
  history of 122
  introduction to 121-122
conceptual process (subtype of situation)
  see also activity; *see also* change mechanism; *see also* event; *see also* process artifact; *see also* process step; *see also* situation
  change mechanism as a subtype of 129
  change mechanism of 137, 140-141, 154

conceptual type hierarchy and 124, 136
decomposition of 138-140
definition of 127-128
event and 136-137, 140
goals of 127, 137-138
input entities and 138
introduction to 135-136
looking inside 136-137
process artifact as a subtype of 128
process step as a subtype of 128-129
script and 141
conceptual type hierarchy
see also concept; *see also* conceptual modeling; *see also* entity; *see also* relation; *see also* scene; *see also* situation
conceptual type hierarchy and 124
definition of 123
diagram of enterprise modeling conceptual type hierarchy 124
enterprise modeling class hierarchy and 163-164
enterprise modeling conceptual type hierarchy description 123-131
introduction to 121-122
object-oriented class hierarchy and 123, 134
use of 132-134, 163-165, 187, 189, 514
configuration of enterprise processes *see under* structural view (of the enterprise)
constraints (on object relations)
behavioral constraints 182
definition of 180
many-to-many 182
one-to-many 181-182
one-to-one 181
postcondition 182
precondition 182
structural constraints 180-181
constraints of objects *see under* postconditions; *see under* preconditions
constructs for the enterprise system
enterprise as a general system 214-216
enterprise as a unified infrastructure 217-219
enterprise as an information-processing network 216-217
enterprise as fractals 221-224
enterprise as functional abstractions of processes 219-221
introduction to 213
control objects of OOSE *see under* object-oriented software engineering (OOSE) of Jacobson
control-coordination use cases *see under* use case
controller *see under* physical symbol system
controlling process class (starter set) 559
controls (of processes)
definition of 146-147
diagram of 147
use of 52, 141, 144, 146-147, 172-175, 290, 446

converting the enterprise modeling class hierarchy to a software development class hierarchy
entity classes and 507
introduction to 506-507
process classes and 508
CORBA 335-337
CRUD (create, read, update, delete) 466
Curtis, B. 135, 169
customer assessment use case *see under* use case
customer cluster 471
customer interface process class (starter set) 558
customer interface use case *see under* use case

D

data-centric enterprise model *see under* object-oriented software development methodology
Davis, Alan 492, 508
decomposition of abstract business process *see under* abstract business process; *see under* structural view of the enterprise
decomposition of business function *see under* business function
decomposition of business process *see under* business process
decomposition of conceptual process *see under* conceptual process (subtype of situation)
decomposition of entity object *see under* entity object
decomposition of process artifact *see under* process artifact (subtype of conceptual process)
decomposition of processes *see under* process decomposition
decomposition of general systems
diagram of 57
functional decomposition 25, 41-42, 489
hierarchy versus 56-58
introduction to 14
nearly decomposable systems 27-28, 469
regression of 27
segmented decomposition 26
spatial decomposition 26
structural decomposition 25-26, 41-42
dependency of business processes *see under* business process
design principles of enterprise *see under* infrastructure architecture (stage 6 of fsbp®)
direct activities of Porter value chain *see under* value activity (of Porter)
direction class (starter set) 552
distributed object environment *see under* procured technology (defined during stage 7 of fsbp®)
distribution
see also outbound logistics (of abstract business process)
method of distribution strategic area 207
driving force (of Tregoe and Zimmerman)

see also strategic areas (of Tregoe and Zimmerman); *see also* strategic framework (of Tregoe and Zimmerman)
definition of 205
definition of enterprise and 230
finding 206-208, 222, 232, 237, 515
strategic areas and 206-208, 222, 232-233
strategic mandates and 231-232, 515
Drucker, Peter 229-230

E

economy
see also industry
definition of 215-216
economy as a general system 215-216
EDVAC 88
emergent properties (of general systems) *see under* general system
emergent resource allocation profile *see under* resource allocation
employee cluster 471
encapsulation (of objects) *see under* object encapsulation
encapsulation engineering principle *see under* object encapsulation
engineer role in engineering project *see under* requirements definition
enterprise
"bootable enterprise" 363
control/coordination hierarchy of 435
culture of 229
definition of 8, 230
enterprise as a general system 190-191, 214-216, 241, 261, 500, 512, 523
enterprise as a unified infrastructure 217-219
enterprise as an information-processing network 71, 93, 194-195, 213, 216-217, 291, 514
enterprise as fractals 221-224
enterprise as functional abstractions of processes 219-221
hierarchical-multilayer structure of 242, 290, 308-311, 433, 435, 438, 466, 513
integrated infrastructure of 217-219, 223, 290-294, 455
modeling of (in general) 246
suboptimization of 218-219
three views of (functional, structural, behavioral) 241-242, 311, 492, 512, 518
value system external to the enterprise 217-218, 226-229, 237-238, 256, 371, 516
enterprise class hierarchy (starter set)
activity class 548
definition of 548
enterprise root class 548
entity class 548-549
hierarchy 548
scene class 549
enterprise communications *see under* channel (information)
enterprise engineering
introduction to 3-4

enterprise leadership *see under* strategy and positioning evaluation (during stage 1 of fsbp®)
enterprise model (stage 4 of fsbp®)
see also abstract business process; *see also* business event; *see also* business rule; *see also* functional business model (FBM); *see also* process dependency model (PDM)
deliverables of 356, 438
development process of 357
functional business model and 357-358
interfaces with other stages 413-414, 492-493
introduction to 411
metamodel of 437-440
methodology summary 412-413
overview of 356-358
process map overview 345-347
purpose of 8, 356, 411
enterprise modeling
abstraction and 220-223
conceptual modeling and 514
definition of 8
fractals and 209-211, 221-223, 446
interface with software development 487, 492-496
need for formalism 3-4
object-oriented paradigm and 189, 194, 461-463, 517-518
three people dimensions of 502, 521-524
"what-how" stack (requirements definition) of 496-497, 509
enterprise modeling class hierarchy (in general)
(Appendix B beginning on page 547 contains the enterprise modeling classes starter set)
see also entity class; *see also* activity class; *see also* scene class
clusters and 468-472
conceptual type hierarchy and 163-164
conversion to software development class hierarchy 164-165, 463, 467, 506-508
definition of 467
deriving classes from various fsbp® stages 480
developing 472-473
documenting 466, 472-473
entity classes (in general) 468
modeling by abstraction level (use of) 185-186
process classes (in general) 468
starter set of (in general) 468, 547
use of 161, 164-165, 463, 467
enterprise modeling class hierarchy (starter set)
activity class 548-549
definition of 548
enterprise root class 548
entity class 548
hierarchy 548
scene class 549
enterprise root class (starter set) 548
enterprise system constructs *see under* constructs for the enterprise system

entity (of the conceptual type hierarchy)
see also abstract entity; *see also* information representation entity; *see also* physical entity; *see also* relation; *see also* scene; *see also* situation
abstract entity 125, 138, 187
activity and 132-134
adaptation to object-oriented modeling 164, 187
conceptual type hierarchy and 124
definition of 125
duality with activity 134
information representation entity 125-126
physical entity 125
use of 33, 132-134, 165
entity (of the general system)
see also entity-relation diagram, structural view (of the general system)
definition of 10
use of 10, 33-35, 38, 216
entity class (in general)
see also entity object; *see also* entity class (starter set)
class-relations diagram and 183
conversion to software class 463
definition of 165
description of 165-169
enterprise modeling class starter set specification
entity class (starter set) 548
entity class-relations diagram (during stage 7 of fsbp®)
see also class-relations diagram
developing 473-474
documenting 474
entity classes (starter set)
definition 549
hierarchy 550
information representation entity class 551-554
real entity class 549-551
entity object
see also entity class
child entity of 167-168
class of (in general) 165, 187, 365-366
compared to process object 176-177
conversion to software development class hierarchy and 467, 506-509
decomposition of 167-168
definition of 165
description of 165-169
diagram of 166
entity collections of 168-169, 179
global object space (GOS) and 321, 336, 365-366
parent entity of 167
peer entities of 168
process objects (in general) and 171
property state of 169
services of 166-167
state of 167
entity objects of OOSE *see under* object-oriented software engineering (OOSE) of Jacobson
entity-relation diagram
class-relations diagram and 183
definition of 33-34

diagramming 33-35
examples of 34
use of 33-34, 49, 183, 261
environment of general systems
see also boundary of general systems
closed system 31
criteria for determining 30
defining 30, 196, 382
description of 28-32
open system 31, 35
Porter Value System and 256
environmental research for the enterprise *see under* business definition (as a pivotal construct)
episodic memory
see also semantic memory
definition of 100
extension and 100-101
use of 100, 221
event (of the general system)
compared to process 19
compared to state 19
definition of 18
introduction to 18
modeling with 20
event (subtype of situation)
see also activity; *see also* change mechanism; *see also* conceptual process; *see also* process artifact; *see also* process step; *see also* situation
asynchronous events 154-156
conceptual process and 136-137
conceptual process and 127, 136-137, 140
conceptual type hierarchy and 124
definition of 127, 136-137, 155-156
modeling with 141-142, 155-156
process step and 149-150, 160, 299
synchronous events 154-156
evolutionary state of industry *see under* industry value system evaluation (during stage 1 of fsbp®)
explosion of information *see under* information
extension *see under* episodic memory; *see under* object-oriented paradigm
Exxon 207

F

factory (as a hierarchical-multilayer system) 65-67
Federal Express 211, 222
feedback
negative feedback 44
positive feedback 44, 80
financial management process class (starter set) 561
financial transaction process class (starter set) 561
Firesmith, Don 110
firm infrastructure (as an activity of the Porter Value Chain)
see also human resource management; *see also* inbound logistics; *see also* marketing and sales; *see also* operations; *see also* outbound logistics; *see also* procurement; *see also* service; *see*

also technology development; *see also* value activity (of Porter)
definition of 254
functional area of the enterprise (as a) 417
support activity of Porter and 254
forecasting process class (starter set) 558-559
formalism deficiency in enterprise modeling *see under* enterprise modeling
foundation classes *see under* procured technology (defined during stage 7 of fsbp®)
fractals
see also Mendelbrot, Benoit
abstract business process (ABP) and 222, 446, 518
abstractions and 210, 221-223
definition of 209
enterprise modeling and 209-211, 221, 446, 518
leveraging at different levels 210-211, 221-223
framework system (level 1)
description of 42
diagram of 42
use of 42-43, 52
Friedrich, Carl 72
fsbp® *see* future strategy business planning
function (of the enterprise) *see* business function
function (reusable scripts) *see under* scripts
functional areas of the enterprise (defined during stage 4 of fsbp®)
see also business function; *see also* functional view of the enterprise
definition of 247, 416
diagram of 248, 259
modeling of with Porter value chain 247-248, 257, 266-267, 417-420
functional business model (FBM) (defined during stage 4 of fsbp®)
adapting the Porter Value Chain 418-420
defining business processes 421-422
defining functional areas 417
defining functions 420-421
documenting business processes 422-423
documenting functions 421
functional business rule *see under* business rule
functional decomposition *see under* decomposition of general systems
functional view (during software development) 489-491, 508
functional view (of the enterprise)
see also business function; *see also* functional areas (of the enterprise)
compared to structural view 290-294
correlating with the infrastructure view 292-294
definition of 245-246
integration with the infrastructure view 290-294, 311, 313, 465, 492, 519

integration with the structural view 290-294
introduction to 245-246
layers of and future strategy business planning 518-519
organizations and 447
use of 242, 266, 294, 300, 311, 518-519
functional view (of the general system)
see also functional view of the enterprise
compared to behavioral view 41
compared to structural view 41
definition of 34
documenting with transformation flow diagram 35-37
enterprise and 242
example of automobile engine 36-37
example of financial model spreadsheet 36-37
integration with the structural view 291
modeling and 42
object-oriented analysis (OOA) and 490-491
use of in systems analysis 34-37, 41, 49, 508
future strategy business planning (fsbp®)
business definition (stage 1) - *see* chapter 18
business operations planning (stage 5) - *see* chapter 22
enterprise model (stage 4) - *see* chapter 21
infrastructure architecture (stage 6) - *see* chapter 23
infrastructure objects (stage 7) - *see* chapter 24
market and product planning (stage 2) - *see* chapter 19
overview of - *see* chapter 17
public policy strategy (stage 3) - *see* chapter 20
academic foundations of 343, 511-518
behavioral view and stages of 520
functional view and stages of 518-519
introduction to 343-345
iterative nature of 347
process map of 345, 347
products of (overview) 346
reengineering and 344-345
structural view and stages of 519-520
value system (of Porter) and 516

G

General Motors 206
general structural patterns
abstraction structural pattern 530-531
change structural pattern 531-532
definition of 530

general system
see also decomposition of general systems; *see also* environment of general systems; *see also* subsystem

classification of 42-48
decomposition of 24-28, 56-58, 62
definition of 8-9, 512
description (summary) 190
economy as a general system 215
emergent properties 26-27
enterprise as a general system 214-216
enterprise modeling and 191, 500
entities (parts) of 10, 33-35, 38, 216
industry as a general system 215
inputs to 9-10, 35
introduction to 23
modeling of 12-16, 163-164, 190-191, 196, 513
modeling requirements of 190
modeling with conceptual type hierarchy 190-191
object-oriented modeling of 163-164, 191-193
objectives of 9, 137-138
outputs from 9-10, 35
overhead of 56
properties of 8-11, 196, 512
relations of entities of 10
suboptimization of subsystems 27, 48, 191, 218-219, 223, 257, 513
three views of (functional, structural, behavioral) 32-42, 49, 241, 261
wholeness 26, 191
generalization of object classes *see under* object classes
geographic architecture *see under* infrastructure architecture (stage 6 of fsbp®)
German apprentice program 229
Gleick, James 209-210
global functions of the organization *see under* organization
global object space (GOS)
applications within 326, 331, 335, 365, 474-475, 508
architecture of 331, 337, 345, 362-366, 463, 465-467, 479
characteristics of 323-326, 363
communications infrastructure of 321
components of 319-322, 327, 363
concept of 319-322, 363
definition of 319
diagram of 320
distributed object technology of 366
entity objects and 321, 336, 345, 365-366, 463
heterarchical organization of 325-326, 336-337
hierarchical-multilayer organization and 243, 314, 323-324, 463
implementation in software 463
information systems planning (of the enterprise and) 462-463
information-processing nodes and 321, 475
introduction to 314, 319
legacy computer systems and 322, 328-329
object class library and 363-365, 463
OMG Common Object Request Broker (CORBA) and 335-337

Open Distributed Processing (ODP) and 331-333, 337
OSI Network Management and 333-334, 337
patterns of communication of 324
people and 314, 321, 324, 327, 329-331, 474, 508
personal assistants and 322, 329-331
physical objects and 322-323, 465-466, 475, 509
process objects and 314, 321, 323-324, 330, 336, 365, 463, 474, 508
procured technology of 363, 366, 463
proxy objects and 321, 324, 326-328, 336, 475
software objects and 243, 322-323, 326, 462, 465-466, 476, 509
standards required to implement 331-336
use of 243, 363, 463
virtual GOS 508
global object space architectural description (during stage 7 of fsbp®)
architecture of the GOS 466
developing the GOS architecture 466
documenting the GOS architecture 466-467
software objects and physical objects 465-466
structural patterns and 466
global value system of Porter *see under* value system (of Porter)
goal (of process)
abstract business process and 270
conceptual process and 127, 137-138
definition of 142
process artifact and 142, 145, 161
goal class (starter set) 553
goal entities of process object *see under* process object
goal-*see*king, adaptive system (level 4)

Harvard Business School 204
Hendry, David 88
heterarchical organization *see under* global object space (GOS); *see also* hierarchical system
Hewitt, Carl 302-303
hierarchical analysis (during stage 5 of fsbp®)
business operating principles and 446
customer needs and 445-446
definition of 445

governance policy and 445
human aspects of 445
mandates / imperatives and 445, 447
organizational and structural philosophy definition 445-446
hierarchical system
see also hierarchical-multilayer systems; *see also* multilayer systems organization
compared to heterarchical organization 325
decomposition versus 56-58
definition of 54
diagram of 55
intervention and performance feedback of 55-56
introduction to 52
meta-layer of 53-57, 62-65, 68-69, 269-270, 513
operations-layer of 53-57, 62-65, 69
systems overhead and 56
hierarchical-multilayer structure of the enterprise *see under* structural view (of the enterprise)
hierarchical-multilayer systems
see also hierarchical systems; *see also* multilayer systems organization
definition of 62
description (summary) 192
diagram of 63
enterprise modeling 191, 193
example of the factory 65-67
example of the organization 67-68
global object space (GOS) and 243, 314, 323-324
introduction to 51-52, 61-62
meta-layer (object-oriented modeling of) 193
modeling of 183, 191-193
modeling requirements of 191
need for autonomy of the lower layers of 65
operations-layer (object-oriented modeling of modeling) 192-193
properties of the layers of 64, 308-309
right of intervention within 64
specialization of layers of 62-64
vertical arrangement of 62
hierarchy of abstract business process *see under* abstract business process
hierarchy of classes *see under* class library
hierarchy of enterprise modeling class hierarchy *see under* enterprise modeling class hierarchy
history of conceptual modeling *see under* conceptual modeling
Hitchins, Derek 9
Hoare, C. A. R. 12
Home Shopping Network 207
homeostatic system (level 3)
description of 43
diagram of 44
information processing and 87
use of 43-44, 52
human resource definition *see under* business resource requirements (during stage 5 of fsbp®)
human resource management (as an activity of the Porter Value Chain)

see also firm infrastructure; *see also* inbound logistics; *see also* marketing and sales; *see also* operations; *see also* outbound logistics; *see also* procurement; *see also* service; *see also* technology development; *see also* value activity (of Porter)
definition of 254-255
deviation with fsbp® and 420
functional area of the enterprise (as a) 417
support activity of Porter and 254

I

IBM 210
identification of objects *see under* object-oriented paradigm (general)
imperative class (starter set) 553
imperatives (of fsbp®) *see* strategic imperatives
inbound logistics (as a subprocess of the abstract business process)
decomposition of 300-301
definition of 271
generic use cases of 282-285
Porter Value Chain and 271
ports of 271
inbound logistics (as an activity of the Porter Value Chain)
see also firm infrastructure; *see also* human resource management; *see also* marketing and sales; *see also* operations; *see also* outbound logistics; *see also* procurement; *see also* service; *see also* technology development; *see also* value activity (of Porter)
definition of 251
functional area of the enterprise (as a) 417
primary activity of Porter and 251
incompatibilities between enterprise modeling and software development methodologies
introduction to 496-497
problem: centralized database enterprise model 497-499
problem: the need for modeling the business process 499-500
problem: the need for modeling process hierarchies 500
indirect activities of Porter value chain *see under* value activity (of Porter)
industry
see also economy
definition of 226-227, 374, 422
determining during enterprise modeling 204-205, 236, 349, 352, 372-374, 379-380, 579
industry as a general system 215
industry as a general system *see under* industry; *see under* general system
industry scope and integration *see under* industry value system evaluation (during stage 1 of fsbp®)
industry value system evaluation (during stage 1 of fsbp®)
definition of 372

evolutionary state of industry 373-374
example of industry structure (North American local exchange carriers) 375-376
industry scope and integration 375-376
research and analysis 373
structure of the industry and 374-375
industry value system of Porter *see under* value system (of Porter)
information
see also message
adaptivity value of 43-48, 87, 92-93, 151, 197, 514
definition of 72-73
explosion of quantity of 80
measuring content of 77, 194, 533-534
redundancy 79
Shannon Theory of 79, 194, 217
information content of message *see under* message
information representation entity
see also abstract entity; *see also* entity; *see also* physical entity
conceptual type hierarchy and 124
definition of 125-126
use of 187, 193
information representation entity (starter set)
hierarchy of 551-552
information representation entity classes (starter set)
business rule class 552
capability class 552
definition of 551-552
direction class 552
goal class 553
hierarchy of 550
imperative class 553
mandate class 553
order class 553
performance result class 552-553
policy class 553
strategy class 554
information structural patterns
definition of structural pattern 532
information transfer quantity structural pattern 533-534
information transfer time structural pattern 533
information systems planning (of the enterprise) *see under* infrastructure objects definition (stage 7 of fsbp®)
information transfer quantity structural pattern 533-534
information transfer time structural pattern 533
information-processing network
see also information-processing node
business process relation with 293
class of 555
definition of 73
description (summary) 194
diagram of 74
enterprise modeling and 194-195
infrastructure architecture (stage 6 of fsbp®) and 457
infrastructure as 79-80, 93, 151, 195, 289, 291-292, 304, 536

introduction to 71-72
modeling of 94, 194-195, 536-538
modeling requirements of 194
object-oriented modeling of 194-195
organization as 129, 302, 305, 311
information-processing network
class (starter set) 554-555
information-processing node
see also information-processing network; *see also* physical symbol system
abstraction of information-processing network (as a) 78-80, 94, 129, 293, 305, 308
business process relation with 293
cellular level of enterprise 80
change mechanism and 129, 151-152, 161, 291-293, 305
changing behavior by changing script 86-87
class (object) 555
decomposition of 78, 94, 129, 151-152, 292, 305
definition of 73, 74, 75, 76
diagram of 75, 91
enterprise behavior and 94, 194-195
functions of 74-76, 92-93
general system (as a) 90-93
hierarchical-multilayered organization of 92
how information is processed 80-87
networking of 76
organizations and 78, 291, 302-308, 445, 514, 534-535
people as 74
physical symbol system and 72, 81, 90-93, 125-126, 196, 514
